

Ramy Lazghab

AI & Machine Learning Engineer

LLMs • Agentic AI • RAG • Production ML Systems

Paris, France • ramy.lazghab@dauphine.eu • +33 07 59 68 79 72

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Professional Summary

AI & Machine Learning Engineer specializing in production systems built on LLMs, agentic AI, and RAG. Experienced designing end-to-end AI platforms combining document intelligence, forecasting, and multi-agent orchestration for real business problems. Currently building regulatory intelligence systems for the cosmetics industry. M.Sc. Data Science & AI candidate, Université Paris Dauphine – PSL.

Core Technical Skills

Programming: Python, SQL, Java, JavaScript, C, R

AI / ML & Frameworks: LLMs, RAG, Multi-Agent Systems, Prompt Engineering; LangChain, LangGraph, Hugging Face, PyTorch, TensorFlow, XGBoost, LightGBM

LLM Platforms & MLOps: Anthropic API, OpenAI API, MCP, LangSmith, Docker, Git, MLflow

Cloud & Data: GCP (Vertex AI, BigQuery, Cloud Run), Streamlit, Pandas, NumPy, Spark, PostgreSQL, Neo4j, FAISS, Qdrant

Professional Experience

AI Engineer Intern

Apr 2026 – Present

Relay X – Paris, France

- **ORACLE:** Cleaned and structured 2,000+ SCCS scientific opinions, EU regulations and amendments (later expanded to 6,000+ documents) into a RAG pipeline using semantic chunking and a Qdrant vector store for evidence-grounded retrieval.
- Built autonomous agents (LangGraph + Anthropic API) gathering live signals from PubMed, PubChem, EUR-Lex, CosIng, news articles and Google Trends as additional ML features.
- Developed XGBoost / LightGBM forecasting models with year-based temporal validation to prevent data leakage; used LLMs to explain predictions and auto-generate a visualization diagram per feature on Streamlit dashboards.
- **PIF AI:** Built an LLM-based document understanding pipeline auto-generating Product Information Files from customer documents, with human-in-the-loop section regeneration and compliance-validation agents.
- Integrated PIF AI into the company's production web application as a customer-facing enterprise feature.

Software Developer Intern

Feb 2024 – Jun 2024

Infinity Management

- Built an e-learning platform using NLP and BERT-based sentiment analysis to personalize learning; backend in Django REST, frontend in React, containerized with Docker.

Web Developer Intern

Jun 2023

Centre National d'Informatique

- Built a secure citizen-registration web application (PHP, HTML, CSS), digitalizing internal onboarding workflows.

Selected Projects

- **TelecomPlus:** Multi-agent customer support (RAG + SQL routing), LLM-as-a-Judge eval, Langfuse & MLflow tracking. *LangChain, LangGraph, OpenAI API, FAISS, Streamlit, PostgreSQL*
- **RAGenius:** AI research assistant answering questions over PDF/CSV via semantic retrieval. *LangChain, Hugging Face, FAISS*
- **Movie Recommender:** End-to-end recommender on GCP (BigQuery ML, Vertex AI, Cloud Run) exposed as a REST API.
- **Alzheimer's Prediction:** Ensemble (XGBoost + deep learning) for early prediction; SHAP for interpretability.

Education

M.Sc. Data Science & Artificial Intelligence

2024 – 2026 (Expected)

Université Paris Dauphine – PSL

B.Sc. Computer Engineering (IoT)

2021 – 2024

Faculty of Sciences of Tunis

Certifications & Achievements

- **Certifications:** LangChain Academy ; Google Cloud – BigQuery ML
- **3rd Place**, RAISE Summit AI Hackathon Paris ; **Winner**, Hack for Good (MoodSync)
- EY Hack for Smart Insurance (InsurAI); IEEE Xtreme 15.0/16.0; IEEE, ITLAB, AIESEC member
- **Languages:** English – Fluent (IELTS) | French – Professional
